Thank you for your business.	

Sales Trakker™ Direct is designed to enhance the sale process, making you more efficient, providing your customers with more accurate information quicker, and making the sales environment more relaxing and productive for all the participants.

QuickBooks® is the #1 accounting system in the US, and targets specifically the small and medium businesses that make up the majority of the companies and the driver of new business growth. But using QuickBooks® on a PC as a cash register is cumbersome and slow, and it is certainly not as mobile as it needs to be!

But with the Trakker™ Direct sales tool, the sales associate can be as mobile as the customer is. The system supports bar coding (dependent upon hand held unit) of products, so that scanning can be used to increase the speed at which products can be selected, while improving accuracy to near 100% perfection. Or products can be retrieved by Item ID or Description, which makes for easy manual retrieval.

At the end of the day, a simple HotSync to the PC posts all sales directly to QuickBooks®.

Speed and capacity are a function of the hand held; in real-world tests an 8MB device stored 5,000 customers and 5,000 items in less than 3 MB! Retrieval of any one item takes less than 1 second, faster than the human using the machine can absorb. Specialized proprietary sync technology keeps connection times to a minimum, to avoid bottlenecks at the PC during peak business periods. The hand held can store hundreds of transactions before needing to upload to QuickBooks®.

Receipts can be printed from QuickBooks® after sync to the PC, or can be printed directly from the hand held at the time of the transaction. Direct printouts can be on a slip printer (2" wide paper, thermal print) or to a full sheet 8.5 x 11 paper (requires a printer with IR port). Supported printers include several battery-powered units, which is ideal for remote sales.
